Lister Wilder UK Importer for Salsco Rollers

Lister Wilder are proud to have been the sole supplier to the UK for Salsco rollers since January 2021. Both family-run companies showcase a reputable history for quality and service, this has resulted in a positive partnership that has strengthened both brands within the UK Golf Machinery market.

Salsco was first established in 1979 supplying a varied portfolio of products including Golf Course and Turf Equipment. All machines are designed and manufactured at their facility in Cheshire, Connecticut, USA. All phases of manufacturing is handled in-house and the products are distributed worldwide, they currently have over 200 dealers and sales representatives globally.

The Salsco greens rollers already come with high praise from existing Golf Course Managers who have stated that their greens rolling time had been cut by nearly a third with the product. As well as time-saving being a key benefit the presentation and playability of the green is said to have been improved dramatically. With an impressive list of prestigious Golf Clubs currently using the rollers, there is a clear desire across the UK for the market leading brand.

Lister Wilder has grown relationships with Golf clients for over 25 years and this addition strengthens our offering. Our strapline #SaleswithService transfers across all areas of the Lister Wilder portfolio with this range being no different. Ensuring golf course maintenance continuity going forward, Lister Wilder will also be supplying spare parts and after-sales services for existing machines in the UK.

We have set up a network of dealers across the UK so that local support can be provided for both spare parts and repairs, please contact us for details of your local dealer and service centre.

Lister Wilder

Lister Wilder is a wholly-owned family business that was established in 1947. Now in its third generation, the company has evolved to become a well-known and well-respected name throughout the industry. Over the last seventy years Lister Wilder has continued to expand and grow within the Agricultural, Construction, Groundcare and Arboriculture sectors.

Salsco

As SALSCO celebrates over 40 years in business, they employ over 70 people, and market over 40 products. In-house salespeople and over 200 dealers and sales representatives distribute SALSCO products worldwide. Plans for expansion and new products are always in the works as the company looks forward to its next 40 years and beyond.

NEW to the UK for 2025

SALSCO

Electric Roller Model HP3E

Salsco, INC.
LEADER BY DESIGN

The Next Generation is Here

100% CLEAN! 100% GREEN!

Model HP3E - Electric Roller

The HP3E performs the same as its sister machine, HP11-III, with the exception of No Noise, No Heat and No Oil! Three driven rolls that oscillate and articulate guarantee 100% roll to ground contact which ensures traction without slipping. The almost 8 mph ground speed and 73" rolling swath makes it a machine that is hard to beat.

Electronic Control Differential

Patent-pending, electronically-controlled, differential technology allows the roller speed to adjust to the demands of the operator and contours of the green while avoiding damage to the turf.

Smart Screen Panel

Some of the information the operator can see: Battery status, alerts & faults including trouble shooting guidance.

Tilt Transport Trailer

Tailgates are gone! Adjustable cushion cylinder, magnetic locking system, safety latch, deflector guards and a full trailer mat are just a few of the standard features. Saves time and operator fatigue.

Standard Features Include:

- 48V/200Ah lithium battery
- 3 phase AC motors
- On board charger
- Hour meter
- LED light kit
- Arm rest seat
- Push button pedal height adjustment
- Cross contamination prevention kit with guards
- Tilt transport trailer

NEW to the UK for 2025

STR-180

Tow Behind Turf Roller

The STR-180 is designed for maximum coverage with a 15' wide rolling swath. Great for fairways, sports fields and any large area that would benefit from rolling. Rolling early in the morning to remove dew has been proven to eliminate more than 95% of dollar spot, without the use of chemicals. Sports fields can reduce injury by smoothing the field and removing divots.

Each roll pivots and floats independently from the frame. This allows for 100% continuous contact with the turf. The STR-180 will easily handle all uneven turf and undulations.

Each roll can be filled with up to 100 lbs. of water. As with all Salsco rollers, the rolls are machined to within two thousandths of an inch concentricity. Each of the rolls have extra-large tapered edges to prevent marking of the turf.

You can be assured that the STR-180 has the quality finish you have come to expect from Salsco.

Standard Features Include:

- Five (5) 10-3/4" diameter x 40" long bevelled steel rolls
- Each roll pivots and each roll floats
- 100 lbs. of water can be added to each roll
- P.S.I. without water - approximately 6.6
- P.S.I. with water - approximately 8.3
- Tractor radio control is standard and is wirelessly controlled from a handheld transmitter
- Hydraulic operated hitch allows the unit to float independent of the tow vehicle
- Three position adjustable height hitch
- 2" pin farm type coupler

SALSCO STR-180 Options:

HEAVY DUTY CROSS CONTAMINATION PREVENTION KIT - Includes rotary brush system on each roll, guards, greaseable bearings and continuous belts and is not only designed to prevent cross contamination it will keep the rolls free from clippings.

SPIKE-AIR KIT - Includes heavy duty spiker frames on each roll, rubber enclosed shafts, 39 heat treated blades on 1" centres to extend the life of the blade, and rubber washers between the blades. Each blade rides on rubber and has rubber between the blades. The rubber extends the life of the blades and allows the blade to deflect around objects and turn while being towed. Spike-Air Rolls are easily engaged by unlocking the lever on the frame which lowers the Spike-Air Roll to the surface.

LED LIGHT KIT - Includes two lights mounted on either side of the tractor control box.

The name says it all
"ROLL-N-GO, EHA"

EHA - ELECTRIC HYDRAULIC ACTUATORS

Drive to the green, raise the wheels, roll the green, lower the wheels and drive to the next green. Self-Contained, no trailer or utility vehicle needed. The Roll-N-Go, EHA is 30% more productive than any trailered roller. Rolling swath is 36" and the Roll-N-Go, EHA will roll an average green in only six minutes.

The Roll-N-Go, EHA is not only for greens, it's great for fairways, approaches and tees as well.

OPTIONS

All of these options can be retro-fit to units in the field

The Inner Spike-Air Kit will gently spike the green to allow water and oxygen penetration through the crust to the roots of the plant.

The Cross Contamination Prevention Kit not only prevents cross contamination from one area to another, brushes continuously clean grass clippings from the rolls. Grass clippings will NOT CLUMP on the end of the roll.

Another great option to use after topdressing is the Top Dressing Brush Kit. (Pictured to the right installed on Model 09065)

Roll early mornings before tournament play. The LED Light Kit is a great option.

LED Light Kit

Inner Spike-Air Kit

Top Dressing Brush Kit

Cross Contamination Prevention Kit

Standard Features Include:

- 5 - Year Warranty
- 13HP Honda Electric Start Engine with Cooling Fan
- 6-Gallon CARB Approved Canister Fuel Tank
- Slide Adjust Arm Rest Seat
- Dual Drive Oscillating Rolls for Positive Traction
- Articulating Steering
- Automotive Type Tilt Steering Wheel
- Hydraulically Operated Turf Tires
- P.S.I. = 10.2 without water added to the rolls, 11.6 with water added to the rolls

Time Saving Boost from Salsco Roller

As a Course Manager, the one resource you never have enough of is time. So, a machine that gives it back to you every time you use it is a valuable asset. That's why Jonathan Smith, who fulfils the role at the prestigious Cowdray Golf Club in West Sussex, rates the Salsco roller he bought from Lister Wilder so highly.

With a substantial £1m investment from the Estate fueling the club's claim for recognition as one of the UK's premier courses, the Salsco has an increasingly important role to play in fine tuning the excellent greens on a day-to-day basis.

The club made the decision to buy the roller after a rigorous extended demo organised by Lister Wilder's Area Sales Manager David Gray. "Greens ironing plays such an important part in ensuring that people's experience of their visit is as good as it can be," says Jonathan. "Previously, we had a much smaller greens iron, and while it did a fair job, it used to take us about four hours to get round where the Salsco can do it to a high standard in just two hours 20 minutes.

He added: "Shotgun starts {where groups of players start their rounds at the same time from different holes} are a particularly big challenge for us because they give us limited time to get the greens prepared. The Salsco makes a big difference in that it allows us to get out there and produce great quality greens in restricted time. Previously, I would have had two guys out there first thing bunker raking but now I can have one out there rolling the greens and another raking the bunkers. The time saving is huge."

Jonathan also likes the flexibility the Salsco gives him to deal with challenges. "If the weather is particularly hot we tend to prefer to roll rather than cut because we believe it gives the greens the best chance and gives our players the best performance," he says.

He adds: "The other beauty of it is that if I am doing any type of renovation work I will rotovate an area, seed it and then roll because it is so effective for consolidation. It is powerful, doesn't get stuck and takes away a lot of treading down.

Jonathan likes the fact that he can when the need arises increase the weight by adding water to the individual rolls, so increasing the psi from 7.0 to 9.2. "That has been particularly useful when we are Verti-Draining and Pro-Coring during our maintenance week" he continues. "Within a few days you would never know the work had taken place."

Jonathan and his team have played a key role in the upgrading of the course in an intensive one-year programme in conjunction with golf course architect Will Swan from Swan Golf Designs and contractors Profusion. The work included the re-design and construction of 45 bunkers, addition of permanent pathways and the re-design and build of a Par 3 course.

The investment in the 18-hole championship course near Midhurst comes in the wake of a particularly successful period during which the club produced growth over each of the past five years. Over that time membership climbed to 750, with a further 110 on the waiting list.

The substantial boost to the golf course lifts its status not just within the golfing world but within the Cowdray Estate itself, where it exists alongside the famous Cowdray Park Polo Club as well as prolific farming, forestry and other interests.

Tim Allen, Cowdray's Director of Golf, is very proud of what has been achieved: "An incredible amount of hard work has gone into the project that has been over two-an-a-half years in the making," he says. "The whole team have been fantastic, and we all hope that members and all golfers enjoy the improvements for many years to come."

Course Manager, Jonathan Smith.

Electric Greens Roller

NO OIL, NO HEAT AND NO NOISE

The Electric Greens Roller, QC is the result of years of testing and product improvement. Both rolls are driven, each with its own heavy duty gear box and electric motor. There is easy access to all electrical computations with a self-diagnostic controller. The speed is variable, up to 11.9 Miles Per Hour.

The Electric Greens Roller comes with a 36V Lithium Battery Pack The Lithium Battery is light which will decrease the P.S.I. ground pressure substantially. It requires no maintenance and the projected life span is 10 Years! After rolling 18 standard size greens, there's 30% - 40% power left.

The Salsco Electric Greens Roller is now available from Lister Wilder.

Load & Go Guidance Rails make it a breeze to load the roller on the trailer. Nothing to adjust, unlock or lock. Simply drive off the green, drive up the tailgate ramp into the trailer, turn off electricity, engage the Lock & Latch, get off the roller, raise the lock/latch tailgate, and drive to the next green. Just as easy and fast in the reverse when arriving at the next green. A full heavy duty rubber mat is standard on both the tailgate and the trailer box. A swivel jack stand with a caster wheel is mounted to the trailer frame. It's also a great piece of equipment to use around the golf course when not being used with the roller

Standard Features Include

- 36V Lithium Battery!
- Dual Drive Oscillating Rolls for Positive Traction
- Articulating Steering
- Automotive Type Tilt Steering Wheel
- Forward/Reverse Seat Slide
- LED Light Kit
- P.S.I. EGR (with Lithium Battery) = 7.6 without water added to the rolls, 9.0 with water added to the rolls

Salsco HP11-III - Triple Roller

GREENS - APPROACHES - FAIRWAYS

SALSCO fabricated a grander version of their premier HP11 Roller and produced the HP11-III Roller. The advantage is having three driven rolls that oscillate and articulate which guarantee 100% roll-to-ground contact and a 73" rolling swath with this advanced version.

The HP11-III is manoeuvrable, dependable, and built to meet the highest standards in smoothing any golf course surface.

Three Driven Rolls that oscillate and articulate guarantee 100% roll to ground contact which assures traction without slipping. The HP11-III travels over the ground following the undulations designed into the turf and smooths the surface without changing it. The almost 11MPH ground speed and 73" rolling width makes it a machine that is hard to beat. With all three rolls on the HP11-III independently powered, traction up slopes and banks is exceptional in wet or dry conditions.

FREQUENTLY ASKED QUESTIONS AND ANSWERS

1. Why create a 73" roller? While most clubs continue to purchase multiple rollers, the HP11-III offers the ability to buy one roller and still be productive.

2. Any damage to the green? No, the roll housings articulate at different degrees of travel, which allows turning without bruising.

3. How does it follow the undulations? All three rolls articulate and oscillate to smooth the surface without changing the undulations designed into the green.

4. How is the traction? There's 100% roll-to-ground contact, which assures traction without slipping.

5. What is the PSI? With 168 sq. in. of contact surface and a weight of 1180, the PSI is low at 7.

6. What is your Warranty? 5-year limited warranty. Honda engines carry a 2-year OEM warranty. Pumps, motors, hoses carry a 1-year warranty.

7. What other uses does it have? Tees, approaches, new sod, and top dressing when using our brushes.

FEATURES & BENEFITS

- 13 HP Honda electric start engine
- 12-volt battery
- 6-gallon, CARB-approved fuel tank
- Engine cooling fan
- Three steel rolls that oscillate and articulate when driven
- Roll housings articulate at different degrees of travel, which allows turning without bruising
- All three rolls drive and float independently which allows for 100% roll to ground contact
- P.S.I. = 7.0 without water added to the rolls, 9.2 with water added to the rolls
- 73" rolling width = productivity
- You can add water inside rolls to increase PSI
- 100% roll-to-ground contact
- Traction without slipping
- Incredible climbing traction, up to 40°
- Increased speed
- Hydraulic steering
- Automotive type steering wheel
- Do more than roll with our accessories
- Transport trailer is standard

SPECIFICATION

Engine	13 HP electric start Honda
Controls	On/off switch, choke & fuel
Battery	12-volt
Seat	Moulded cushion with protective edge trim
Brakes	Hydrostatic drive
Traction Drive	All three rolls drive and float independently
Hydraulic System	One heavy duty variable speed piston pump delivers oil to three hydraulic motors that drive the rolls
Speed	Variable, 0 – 11mph
Psi	7 PSI. 168 sq. in. of contact

Optional extras as standard on UK supplied machines

All of these options can be retrofit to units already in the field

- All UK machines supplied as standard with
- Top Dressing Brush Kit
- Transport Trailer
- Light Kit
- Seat Arm Rest Kit

*Limited warranty

Managing in a Sensitive Environment

Salsco and Baroness deliver at Hayling

Links golf courses don't come much more dramatic than Hayling. Looking out across the English Channel with vessels of all sizes drifting by, it features semi-blind shots, shallow and deep bunkers, rugged fairways and immaculate greens. It's a great golfing test in any weather, but all the more so in high coastal winds when your scorecard can be severely pressured.

With an SSSI designation covering the whole site, it is a course which demands a management regime that allows nature to have its way while nurturing a delicate playing surface that, given the sand and shingle base, dries out very quickly. Course Manager Graeme Roberts takes a lot of trouble to identify the machinery that will deliver the right conditions for each area. In recent months, that has included a Baroness GM2810 five-deck rotary mower and a Salsco HP11 roller, both sourced from Lister Wilder.

Graeme based his decision to invest in the American-built Salsco on his own experience from time spent working in the US together with enthusiastic recommendations from other Course Managers who have had experience of them since Lister Wilder took over the UK main dealership.

"I like the fact that it has wider self-cleaning rollers so is a lot more efficient and effective in the finish that it achieves," he says. "The ground it covers in the time is a really big thing for us, as is the fact that it follows the undulations well because we have a lot of movement in the approaches and greens.

"We have a lot of slopes on the edges of our greens and it's also very important that it can roll without losing traction and creating stress, especially when changing direction. Having every roller driven means that you get the best traction possible."

He added: "Depending upon events, we try to roll between one and three times a week in the main season and then, in the autumn and spring when the growth rate is down, maybe up the rolling in exchange for cutting."

Graeme is very happy with the resulting boost to greens performance. "The ball roll definitely improves with it, and it's invaluable in getting sand into the soil profile when you have top dressed, while also helping to reduce the mess that is often left by other rollers."

Meanwhile, the Baroness GM2810 has proved itself on Hayling's semi-rough. "We already have two Baroness LM66 pedestrian hand mowers and have been impressed by the sheer quality of steel used for the blades," says Graeme. "They hardly ever need grinding or a tweak, so knowing that the blades on the 2810 are of the same quality meant a lot to us. The fact that you have less down time means you can optimise use and fuel efficiency, and it puts less stress on the hydraulics.

"We don't have a lot of cut rough so it doesn't get used a lot and doesn't need to be over complicated with computer-driven technical features. The simplicity of the height of cut change and the accessibility of the rear units for the cleaning and maintenance of the machine were both important. It's a very user-friendly machine from front to back, and the operators find it comfortable for four or five hours at a time, so there are no issues with fatigue."

Graeme liaised closely with Lister Wilder Area Sales Manager Mark Carter in the purchase of the Salsco HP11-III and Baroness GM2810 and rates both the quality of his advice and the wider back-up from within the dealership.

Hayling Golf Club has a big history that stretches right the way back to 1883 when what was then known as the Hayling Island Golfing Club laid out nine holes on common land. Enthusiasm was strong and the course was extended to 18 holes within a year, when the committee also had the foresight to form a club for ladies. A string of eminent course designers have contributed over time to a course that has constantly evolved and withstood some hefty wartime disruption. Today, it remains an exquisite links blend of superb layout, breathtaking views and testing challenges.

When it comes to how best to tackle today's challenges Graeme gets plenty of advice, not just from his capable team at Hayling but from his father Gareth and brother Scott, both of whom are Course Managers. "We always have different views and you always know what the chat is going to be at the dinner table. It's tough for my poor Mum and wife … but they survive!"

Course Manager, Graeme Roberts.
